## Education

---

**Mumbai University**, B.E. in Information Technology

2016 – 2020

- CGPA: 7.27

## Experience

---

**Senior Software Engineer**, Releaseowl

May 2025 – Present

- Improved indexing strategies on tables with 10M+ records for better faster fetching of data
- Implemented global search filter to search across different entities
- Created Github actions for auto deployments to all clients. Add basic prettier config for stricter formatting in the project.

**Senior Software Engineer**, Madison Logic

Jan 2025 – May 2025

- Worked on POC to automate the initial setup of campaigns that manually took about 2-3 days, reduced it to 5mins
- Worked on dagger to write CI pipelines using Golang so that pipelines issues can be tested and fixed in local system

**Senior Software Engineer**, Swabhav Venturelabs(Talent Sourcing And Mentoring)

Nov 2020 – Dec 2024

- Improved mentoring by introducing interactive sessions and modules, making learning more engaging. Also supported faculty in providing specific feedback, which led to better matches for recruitment and placements.
- Implemented session planning, allowing faculty to provide targeted guidance to students based on their assignments and performance scores. Additionally, enhanced the efficiency of talent tracking.
- Developed a proctoring system internally, cutting costs by avoiding the need for external help. This also improved the accuracy of assessments and empowered our in-house team to create more customized tests
- Tech Stack:
  - Led a team in the development of both the SAM and Clone Your Customer modules, instrumental in accurate market assessment and customer acquisition strategies.
  - Effectively addressed the task of managing large data uploads by using smart stream-based methods.
- Tech Stack: Golang(Gorm, Gorilla mux, Viper), NodeJS(Express, Sequelize, Papapare, FastCSV), Angular, Docker, Kubernetes, MySQL, ReactJS, NextJS, Docker

## Technologies

---

Golang, NodeJS, Angular, JavaScript, ReactJS, NextJS, Svelte, Docker, Kubernetes, MySQL, PostgresSQL, Mentoring, Planner

## Projects

---

**EquiSplit**

backend

- It is a mobile application that simplifies expense management for groups. The app allows users to easily track shared expenses, split costs equally, and maintain a real-time log of outstanding balances between group members.
- Tools Used: Golang, Flutter, PostgresSQL, Docker
